# Advanced Imaging Technology

Holo™ Platform

Holo™ PW

Spatial-Time Speckle Reduce Technology

# Holo™ Platform

## Holo™ Ultrasound Platform

Holo™ ultrasound platform provides a cutting-edge 64-beam imaging. Due to high-speed hardware platform, system can handle up to 5000 frames/s, that means around 1GB/s data being processed instantly. Those all dramatically increase diagnosis confidence and improve accuracy.

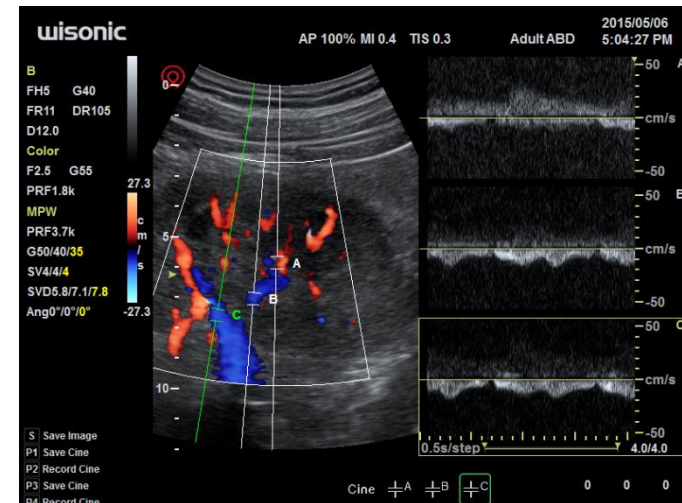

1GB/s

# Holo™ PW

- Max 3 sample gates simultaneous
- Allow to move each gate in real-time mode and frozen status.
- Used before, at & after vascular pathologic change position with synchronized one heart beat measurement.
- Holding breath becomes a history. With Holo PW, user can acquires several vessels at same time, such as renal artery and vein

# Spatial-Time Speckle Reduce Technology

- Noise movement trace is random
- Like Brown movement
- Based on the HOLO™ platform, system capture the noise with high frame rate
- Reduce the noise in the spatial and time two dimensions

# Spatial-Time Speckle Reduce Technology

Elegant appearance

# Ultra-wide Accurate Steer imaging

- High performance probe with ultra-wide beaming
- Maximum steer angle for linear probe is  $30^{\circ}$
- The minimum step size is  $1^{\circ}$
- Accurate matching human blood vessels path. Obtaining more stronger Doppler signal, getting better spectrum and blood flow images

# Extend FOV

FOV for linear probe can be increased by  $10^\circ$ ;  
FOV for large convex probe can be increased from  $55^\circ$  to  $68^\circ$ .

# B independent steering

- The steering can make the needle tip and needle path more clear
- B images also support ultra-wide angle accurate steering

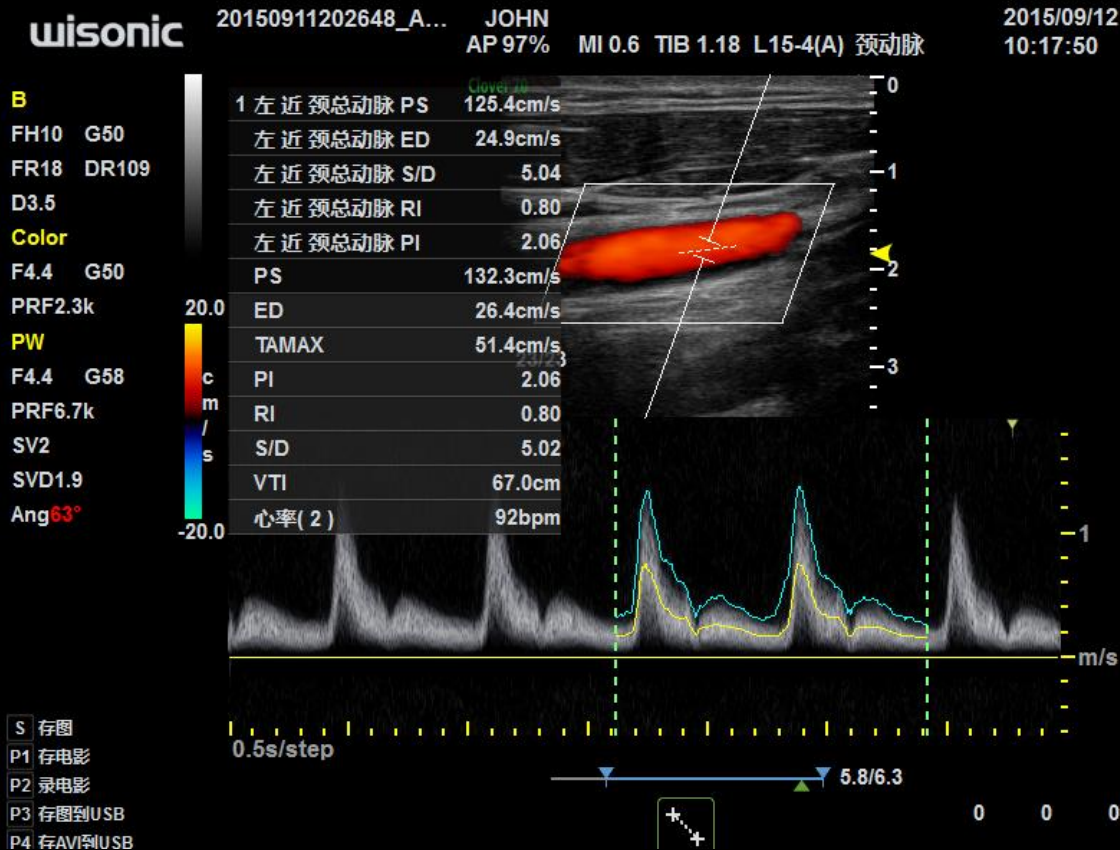

# FZoom

One key zoom the image in the full screen  
For the anesthesia application, the doctor can see the image clearly.

# Measurement assignment function

After the normal measurement, you can name this application measurement item base on the value result. In daily clinical applications, it can help doctors to simplify the operation, to avoid duplication of measurements, to shorten the time of bed in next checking.

# Movie dynamic storage

Complete recording operation process, adjust the depth, switch to the Color mode, you can provide a complete teaching demonstration video for anesthesia and so on.

Most of competitors do no support such function

# From Boot to Scan

**5 Seconds**

No matter the emergency time, intensive time, or windy rain weather outside, the clover in order to save the valuable time not more than golden 120s for the critically patient. It can be rapid start-up of the 5S and excellent image, convenient operation.

Elegant appearance

# Auto Doppler

- One button press: B, PW, Color
- Auto location the ROI on the vessel
- PW & Color Steer angle auto optimization
- PW SV size, position and correct angle
- High efficiency, save time

Before

After

# wiNeedle-Needle Enhancement Technology

- Auto adjustment the steer angle
- Improve the efficiency without manual adjustment angle

# wiNeedle

After wiNeedle on

Without needle enhancement

# IMT

- Auto position the ROI and measurement result
- Revise ability the ROI size and position

# Ergonomic Solutions

Lightweight compact design with magnesium alloy case

Dual transducer ports in main unit

15' high definition LCD monitor

User centric control panel

Customized user-defined key

Full back lighting of keyboard for easy identification

# Stable and Durable

18  
Procedures

- Durable
- Light weight

1.5mm of case thickness, compared with present product 2.0mm thickness, our case need more procedures and high quality control.

# Light Weight with 2 Ports

- Super light weight, with 2 transducer ports weights only 4.9 kg(include battery)
- Expand your application, with phased and linear both connected, dramatically increase efficiency.
- Decrease the frequency of the probe insert and pull out, prolong the lifetime of the main unit and probes.

Only Clover have all these features in the world!

# Ergonomic Design

## Control Panel

1. Knob with Button
2. Full print Keyboard
3. 1.5 inch trackball
4. Programmable Keys

# Ergonomic Trolley

- Built-in lock, safer
- Built-in storage basket
- 200mm height range, standing or sitting could be at best position to focus on operation
- 125mm diameter wheels, smoother to move

# Advanced ergonomic cart

15' HD LCD monitor

90 min built-in battery only with 4.9kg weight

Anti-theft lock

High volume storage tray

Durable magnesium alloy case with dual probe ports

Height adjustment

# Broad set of transducers

High density 192 element linear probe, ultra wide bandwidth, meet from lower extremity deep vascular examination to the superficial musculoskeletal examination

Up to 20MHz ultra high frequency linear probe, for the use of special application, such as melanoma, or small animals research.

# Transducers

## L15-4 (Linear)

Application: Small part, Vascular, Musculoskeletal, Superficial, Pediatrics, Neurology, Adult Abdominal  
FOV(max): 38mm

## L10-5 (Linear)

## C5-1 (Convex)

Application: Adult Abdominal, Pediatrics, Gynecology, Obstetrics, Vascular, Musculoskeletal  
Convex Radius: 60mm

## L20-10 (Linear)

Application: Small part, Vascular, Musculoskeletal, Superficial, Pediatrics, Neurology,  
FOV(max): 12mm

## P4-1 (Phased Array)

Application: Adult Cardiac, Pediatric Cardiac, Adult Cranial, Adult Abdominal  
FOV(max): 90°

## EV10-4 (Endocavity)

Application: Application: Gynecology, Obstetrics, Urology  
Convex Radius: 11mm

# Transducers

## D7-2 (4D probe) (Linear)

Application: OB, Adult Abdominal  
FOV(max): 40mm

## C8-3(Micro convex)

Application: Pediatrics Abdominal,  
Pediatrics Cardiac, Vascular,  
Musculoskeletal  
Convex Radius: 15mm

## LH15-6(Linear)

Application: Small part, Vascular,  
Musculoskeletal, Superficial,  
interoperation, Nerve  
FOV(max): 25mm

## C7-2(Micro convex)

Application: Abdominal,  
interventional  
Convex Radius: 20mm

## L12-5 (Linear, 50mm)

Application: Breast, Small part,  
Vascular, Musculoskeletal  
FOV(max): 50mm

Thank you!
